

# SASI Training and Orientation

## Handout

### Key Questions to Consider Before Using SASI

1. Why does the network want to integrate services/care?
2. How will the effort to measure service integration be evaluated (what constitutes "success")?
3. Will the network establish a process to periodically measure service integration status and compare to previous results? Will integration on certain dimensions of care be a focal point for quality improvement?
4. What is the network's population of interest? Why is it of interest?
5. What services are needed to serve that population (keep them healthy)?
6. What services does the network provide? Are there gaps or capacity/access issues?
7. How could the network address these gaps?
